

Framex foam is a super light and flat first class mounting product

The Framex foam is composed of two natural white museums board in solid colour (dyed throughout) conservation board manufactured with emission free adhesive and polystyrene center. The liners are possessing excellent characteristics ideal for conservation quality picture mounting. The Liners are free of optical brightening agents and has passed the Photographical activity test (PAT) in accordance with ISO 18916. The liners are PH neutral, lightfast and heritage archival. The museum board are made of 100% pure virgin fibers.

Item	Description	Colour	thickness (mm)	g/m2	Size in (mm)	Sht./unit	Sht./pallet

Storage conditions

Paper & board are material possessing hygroscopic properties. That means they can either absorb or release moisture from the atmospheric surroundings. Hygroscopic materials are constantly trying to compensate moisture differences between the surroundings ambient air. This is a never-ending dynamic process.

Since the relative humidity depends upon the prevailing weather conditions, there are often strong fluctuations. These weather fluctuations have a significant influence on storage conditions especially in non-temperature-conditioned storage rooms.

Bethien products are produced and stored under controlled environmental conditions with a constant relative humidity between 45 to 60%. In case of large temperature variations between the material and ambient air there is a great risk of material warping, shrinking or in fact even increasing.

Recommended storage conditions

Temperature 18-20°C and relative humidity 50-55%
